

**EMBASSY OF INDIA SCHOOL , MOSCOW**  
**REPORT OF THE EDUCATIONAL TRIP TO EUREKA PARK**

**CLASS II**

**DATE: 16/05/2017**

**CLASS TEACHER: MRS SMITA**

*"I hear and I forget, I see and I remember. I do and I understand."*

We the children of class II had a wonderful opportunity to explore the magic of science through experiential learning by our visit to the Eureka park on 16<sup>th</sup> of May 2017.

As the name goes " Eureka park", we also thought that we will be enjoying the rides and slides and have a playful time in some park. But friends, it was totally a wonderful and unique experience for all of us.

Eureka park, situated in the centre of Akademicheskya is a scientific and entertainment center for children. it is a place where knowledge and entertainment co exist . The park was a novel project initiative that started in 2012 by Boris Polgeym , in order to provide a platform for children to learn the innovative , creative and scientific skills motivating them to become the budding young scientists of tomorrow.

It is a scientific and educational center for the children from 4 to 15 years where in they will not only see and hear a lot of interesting things but themselves will be actively involved in the process.

The center conducts master classes and workshops for children on various themes. Master classes are conducted in various themes like marvel physics , kitchen self animation, riddles of view, chemicals for all, life under microscope , brilliant detective , bioacoustics , laboratory odours and many more .

We got the opportunity to visit the laboratory odours . Two research doctors took us inside a room which was a miniature laboratory in itself.

We got many opportunities to have hands on experience with chemicals , test tubes , jars and many more creating a rainbow of colours, spectacular explosions, green fire, a small eruption of volcanoes etc..

We were thrilled to see the magical moments. It

was our first acquaintance with the mysteries of science of chemistry. We performed many experiments with potassium dichromate, potassium iodide , ferric chloride and many more unravelling many mysteries related to paints and colours .

In fact we were feeling as if we have become junior scientists performing experiments and

doing research.

We came out of the laboratory enriched and happy that we discovered the wonderful world of chemistry together.

On behalf of all the class II children I take this opportunity to thank our class teacher Mrs Smita mam, Olga mam, Maria Mam and Bindu mam for all support and guidance .They also appreciated our class for the well-disciplined behavior we showed during the entire trip. The trip will indeed remain a beautiful memory in our school life.

I also thank our principal sir for giving us this great opportunity to visit Eureka park.

We would definitely suggest all our friends to visit the park and explore the mysteries of science in the days to come. The park is open on all days except Sundays from 11 am to 7 pm. Do visit and give wings to your scientific
